IPS9 in R: Two-way analysis of variance (Chapter 13)

Bonnie Lin and Nicholas Horton (nhorton@amherst.edu)

July 20, 2018

Introduction and background

These documents are intended to help describe how to undertake analyses introduced as examples in the Ninth Edition of *Introduction to the Practice of Statistics* (2017) by Moore, McCabe, and Craig.

More information about the book can be found here. The data used in these documents can be found under Data Sets in the Student Site. This file as well as the associated R Markdown reproducible analysis source file used to create it can be found at https://nhorton.people.amherst.edu/ips9/.

This work leverages initiatives undertaken by Project MOSAIC (http://www.mosaic-web.org), an NSF-funded effort to improve the teaching of statistics, calculus, science and computing in the undergraduate curriculum. In particular, we utilize the `mosaic` package, which was written to simplify the use of R for introductory statistics courses. A short summary of the R needed to teach introductory statistics can be found in the mosaic package vignettes (http://cran.r-project.org/web/packages/mosaic). A paper describing the mosaic approach was published in the *R Journal*: https://journal.r-project.org/archive/2017/RJ-2017-024.

Chapter 13: Two-way analysis of variance

This file replicates the analyses from Chapter 13: Two-way analysis of variance.

First, load the packages that will be needed for this document:

```
library(mosaic)
library(readr)
```

Section 13.1: The two-way ANOVA model

```
HRTRATE <- read_csv("https://nhorton.people.amherst.edu/ips9/data/chapter13/EG13-08HRTRATE.csv")
HRTRATE_tidy <- HRTRATE %>%
  tidyr::gather(key = Group, value = Heart_Rate, Control, Runners)

## Figure 13.4, age 710
favstats(Heart_Rate ~ Sex | Group, data = HRTRATE_tidy)

##              Group min  Q1 median  Q3 max    mean       sd   n missing
## 1 Female.Control 105 137    147 160 196 148.000 16.27095 200       0
## 2   Male.Control  77 119    130 142 172 130.000 17.10035 200       0

By default, the `read_csv()` function will output the types of columns, as we see above. To improve readability for future coding, we will suppress the "Parsed with column specification" message by adding `message = FALSE` at the top of the code chunks.

Section 13.2: Inference for two-way ANOVA
